

Expert Witness Checklists 3d Fall 2026 Update Highlights

The Fall 2026 update will completely replace the previous four-volume set, issued in Fall 2025. In 2024, this set changed to a pamphlet format. This should greatly improve the reader's experience in terms of filing pages within a limited binder system—allowing the work to easily expand as needed. Though the format has changed, customers are not being charged more for this format change. Subscribers will pay the same overall price that they would have been charged during the course of the year.

Your October 2026 Update to Expert Witness Checklists 3d provides the following new and important information:

§§ 2:375 to 2:377 Urology Expert: About 750,000 urologic procedures are performed in the U.S. each year. Urology malpractice cases are expensive and complex, and the plaintiff usually will need urology experts to support their case. The update discusses a cause of action for urology malpractice, as well as the direct and cross-examination of experts in such cases.

Chapter 45 Environmental Litigation Expert: Experts often dominate environmental trials. The science is uncertain, and experts speak in probabilities rather than certainties. Under Federal Rule of Evidence 702, expert testimony is admissible if it will help the jury and the witness is qualified by knowledge, skill, experience, training or education. To show that a polluter or a government agency injured the plaintiff, expert proof is usually needed on four points: diagnosis based on exposure, causation, the link between exposure and symptoms, and signs of neuropathy.
